MAYFAIR DIAGNOSTICS OFFERS BODY COMPOSITION PROFILING WITH MRI

Mayfair Diagnostics is proud to announce that we are the first medical imaging company in Canada to offer private pay body composition profile (BCP) services!

Using our MRI technology and an artificial intelligence and bioinformatics platform, BCP provides an individualized description of a person's body composition based on a rapid MRI scan.

BCP MRI allows for a greater understanding of the patient and the ability to personalize clinical care. For example, it allows precise differentiation of tissue type and compartment. This may assist with diagnosis and treatment options for conditions such as coronary artery disease, non-alcohol-related fatty liver disease, type II diabetes, etc.

The BCP MRI scan quantifies fat and muscle composition in major body and organ compartments:

- Visceral adipose tissue
- Abdominal subcutaneous adipose tissue
- Liver fat
- Muscle volume
- Muscle fat infiltration

As part of this exam, Mayfair Diagnostics will perform a neck-to-knee MRI scan at our Mayfair Place location. Once data processing is complete, it is verified by a radiologist who will review all acquired imaging and generate a report. Patients will also be mailed a report package.

If you have questions or concerns, please contact BD@radiology.ca or visit radiology.ca/bcp-mri.
